Thin Solid Films 257 (1995) 251–253

Thin Solid Films

Subject Index of Volume 257

Adsorption
effect of the morphology of thin films on the damping of quartz crystal oscillators 139
the effect on polycrystalline ZnO film surfaces due to an Ar plasma introduced by a vacuum gauge 58
Alkali metals
optical properties of C_{60}- and C_{70}-based solid films 211
Aluminium
the interfacial chemistry of metallized, oxide coated, and nanocomposite coated polymer films 77
Aluminium nitride
reactive low voltage ion plating of aluminium nitride films and their characteristics 116
Aluminium oxide
the interfacial chemistry of metallized, oxide coated, and nanocomposite coated polymer films 77
Amorphous materials
electrical properties of a-GaAs/c-Si (p) heterojunctions 98
effect of the morphology of thin films on the damping of quartz crystal oscillators 139
Annealing
electrical transport studies in disordered GaAs/AlAs superlattices 94
Anodic oxidation
influence of rapid thermal annealing on the electrical characteristics of GaAs metal–oxide–semiconductor structures with a double oxide layer 110
Atomic force microscopy
crystal growth and structure of fullerene thin films 154
C_{60} films on surface-treated silicon: recipes for amorphous and crystalline growth 147
the microstructure of thin films observed using atomic force microscopy 15

Boron carbide
preparation of cubic boron nitride films by use of electrically conductive boron carbide targets 40
Boron nitride
preparation of cubic boron nitride films by use of electrically conductive boron carbide targets 40

Carbon
nucleation enhancement of diamond using diamond-like carbon film synthesized from polymer as an intermediate layer 28
observation of an optical-modulation effect on second harmonic generation in C_{60} thin films 244
Chalcogens
a new photovoltaic effect from $CuInSe_2$ (or related materials)/SnO_2 structures 137
Chemical vapour deposition
a new photovoltaic effect from $CuInSe_2$ (or related materials)/SnO_2 structures 137
laser chemical vapour deposition of TiN and TiC films 7
nucleation enhancement of diamond using diamond-like carbon film synthesized from polymer as an intermediate layer 28
structural and optical properties of InP/GaAs strained heterostructures grown by metal–organic chemical vapor deposition 36
Chromium
scanning tunnelling microscopy of the nucleation and growth of sputter-deposited Cr on graphite 83
Coatings
hypervelocity impact tests on polycrystalline diamond deposited over silicon substrates 68
the interfacial chemistry of metallized, oxide coated, and nanocomposite coated polymer films 77
Conductivity
the effect on polycrystalline ZnO film surfaces due to an Ar plasma introduced by a vacuum gauge 58
Contacts
refractory metal-based low-resistance ohmic contacts for submicron GaAs heterostructure devices 54

Deposition process
electrochemical deposition of n-zinc mercury selenide thin films 46
observation of an optical-modulation effect on second harmonic generation in C_{60} thin films 244
preparation of cubic boron nitride films by use of electrically conductive boron carbide targets 40
Diamond
hypervelocity impact tests on polycrystalline diamond deposited over silicon substrates 68
nucleation enhancement of diamond using diamond-like carbon film synthesized from polymer as an intermediate layer 28
Dielectrics
optical properties of C_{60}- and C_{70}-based solid films 211

Electrical properties and measurements
bidirectional bistability in a GaAs/AlGaAs double heterojunction triangular barrier switch (DHTBS) 104
characteristics of zinc oxide thin films prepared by r.f. magnetron-mode electron cyclotron resonance sputtering 22
electrical properties of a-GaAs/c-Si (p) heterojunctions 98
electrical transport studies in disordered GaAs/AlAs superlattices 94
spectral and photocarrier dynamics in thin films of pristine and alkali-doped C_{60} 233
the spatially resolved composition of K-doped C_{60} films 204
Electrochemistry
electrochemical deposition of n-zinc mercury selenide thin films 46
electrochemistry of fullerene films 166

Elsevier Science S.A.

Electronic devices
bidirectional bistability in a GaAs/AlGaAs double heterojunction triangular barrier switch (DHTBS) 104
spectral and photocarrier dynamics in thin films of pristine and alkali-doped C_{60} 233
Electron microscopy
crystal growth and structure of fullerene thin films 154
Epitaxy
crystal growth and structure of fullerene thin films 154
Evaporation
the microstructure of thin films observed using atomic force microscopy 15

Fullerenes
C_{60} films on surface-treated silicon: recipes for amorphous and crystalline growth 147
electrochemistry of fullerene films 166
observation of an optical-modulation effect on second harmonic generation in C_{60} thin films 244
optical properties of C_{60}- and C_{70}-based solid films 211
photochemical transformation of C_{60} and C_{70} films 185
spectral and photocarrier dynamics in thin films of pristine and alkali-doped C_{60} 233
the spatially resolved composition of K-doped C_{60} films 204

Gallium arsenide
bidirectional bistability in a GaAs/AlGaAs double heterojunction triangular barrier switch (DHTBS) 104
electrical properties of a-GaAs/c-Si (p) heterojunctions 98
influence of rapid thermal annealing on the electrical characteristics of GaAs metal–oxide–semiconductor structures with a double oxide layer 110
influences of substrate surface orientation on misfit accommodation in InGaP/GaAs heterostructures 72
refractory metal-based low-resistance ohmic contacts for submicron GaAs heterostructure devices 54
structural and optical properties of InP/GaAs strained heterostructures grown by metal–organic chemical vapor deposition 36
Graphite
scanning tunnelling microscopy of the nucleation and growth of sputter-deposited Cr on graphite 83
Growth mechanism
effect of processing parameters on the properties of hydroxylapatite films grown by pulsed laser deposition 125
laser chemical vapour deposition of TiN and TiC films 7

Heterostructures
electrical properties of a-GaAs/c-Si (p) heterojunctions 98

Indium oxide
characteristics of indium tin oxide films deposited by r.f. magnetron sputtering 32
Indium phosphide
structural and optical properties of InP/GaAs strained heterostructures grown by metal–organic chemical vapor deposition 36
Interfaces
electrochemistry of fullerene films 166
Ion plating
reactive low voltage ion plating of aluminium nitride films and their characteristics 116

Langmuir–Blodgett films
determination of orientation of the IgG molecules in immobilized Langmuir monolayers by means of binding with fragment specific anti-immunoglobulin antibodies 130

Laser ablation
effect of processing parameters on the properties of hydroxylapatite films grown by pulsed laser deposition 125
Metal–oxide semiconductor structure
electron conduction of microcracks in dielectrics 134
influence of rapid thermal annealing on the electrical characteristics of GaAs metal–oxide–semiconductor structures with a double oxide layer 110
Molecular beam epitaxy
crystal growth and structure of fullerene thin films 154
Monolayers
determination of orientation of the IgG molecules in immobilized Langmuir monolayers by means of binding with fragment specific anti-immunoglobulin antibodies 130

Nanostructures
observation of an optical-modulation effect on second harmonic generation in C_{60} thin films 244
refractory metal-based low-resistance ohmic contacts for submicron GaAs heterostructure devices 54
Nucleation
nucleation enhancement of diamond using diamond-like carbon film synthesized from polymer as an intermediate layer 28
scanning tunnelling microscopy of the nucleation and growth of sputter-deposited Cr on graphite 83

Optical properties
characteristics of zinc oxide thin films prepared by r.f. magnetron-mode electron cyclotron resonance sputtering 22
observation of an optical-modulation effect on second harmonic generation in C_{60} thin films 244
optical properties of C_{60}- and C_{70}-based solid films 211
optical recording performance of thin films of phthalocyanine compounds 88
photochemical transformation of C_{60} and C_{70} films 185
reactive low voltage ion plating of aluminium nitride films and their characteristics 116
Optical spectroscopy
spectral and photocarrier dynamics in thin films of pristine and alkali-doped C_{60} 233
Organic substances
observation of the ordered growth of coronene on Ag(111): a scanning tunnelling microscopy study of vacuum deposited molecules 63
Organic substrates
optical recording performance of thin films of phthalocyanine compounds 88
Organometallic vapour deposition
influences of substrate surface orientation on misfit accommodation in InGaP/GaAs heterostructures 72
Oxygen
photochemical transformation of C_{60} and C_{70} films 185

Phase transitions
electrochemistry of fullerene films 166
Photoconductivity
spectral and photocarrier dynamics in thin films of pristine and alkali-doped C_{60} 233
Photovoltage
fabrication, characterization and photovoltaic study of a TiO_2 microporous electrode 144
the effect on polycrystalline ZnO film surfaces due to an Ar plasma introduced by a vacuum gauge 58
Physical vapour deposition
effect of processing parameters on the properties of hydroxylapatite films grown by pulsed laser deposition 125

Plasma processing and deposition
characteristics of zinc oxide thin films prepared by r.f. magnetron-mode electron cyclotron resonance sputtering 22
hypervelocity impact tests on polycrystalline diamond deposited over silicon substrates 68
Polymers
nucleation enhancement of diamond using diamond-like carbon film synthesized from polymer as an intermediate layer 28
photochemical transformation of C_{60} and C_{70} films 185
Potassium
the spatially resolved composition of K-doped C_{60} films 204

Raman scattering
the spatially resolved composition of K-doped C_{60} films 204
Resistivity
characteristics of indium tin oxide films deposited by r.f. magnetron sputtering 32

Scanning electron microscopy
hypervelocity impact tests on polycrystalline diamond deposited over silicon substrates 68
Scanning tunnelling microscopy
observation of the ordered growth of coronene on Ag(111): a scanning tunnelling microscopy study of vacuum deposited molecules 63
scanning tunnelling microscopy of the nucleation and growth of sputter-deposited Cr on graphite 83
Schottky barrier
properties of titanium–tungsten thin films obtained by magnetron sputtering of composite cast targets 1
Selenides
electrochemical deposition of n-zinc mercury selenide thin films 46
Semiconductors
bidirectional bistability in a GaAs/AlGaAs double heterojunction triangular barrier switch (DHTBS) 104
electrochemical deposition of n-zinc mercury selenide thin films 46
Silicon
C_{60} films on surface-treated silicon: recipes for amorphous and crystalline growth 147
Silicon oxide
influence of rapid thermal annealing on the electrical characteristics of GaAs metal–oxide–semiconductor structures with a double oxide layer 110
Solar cells
a new photovoltaic effect from $CuInSe_2$ (or related materials)/SnO_2 structures 137
Solid electrolyte interface
fabrication, characterization and photovoltaic study of a TiO_2 microporous electrode 144
Sputtering
characteristics of indium tin oxide films deposited by r.f. magnetron sputtering 32
preparation of cubic boron nitride films by use of electrically conductive boron carbide targets 40
properties of titanium–tungsten thin films obtained by magnetron sputtering of composite cast targets 1
the microstructure of thin films observed using atomic force microscopy 15
Stress
influences of substrate surface orientation on misfit accommodation in InGaP/GaAs heterostructures 72
Structural properties
effect of the morphology of thin films on the damping of quartz crystal oscillators 139
reactive low voltage ion plating of aluminium nitride films and their characteristics 116
Superlattices
electrical transport studies in disordered GaAs/AlAs superlattices 94
Surface and interface states
electron conduction of microcracks in dielectrics 134
Surface conductivity
electron conduction of microcracks in dielectrics 134
Surface defects
electron conduction of microcracks in dielectrics 134
Surface morphology
effect of processing parameters on the properties of hydroxylapatite films grown by pulsed laser deposition 125
effect of the morphology of thin films on the damping of quartz crystal oscillators 139
Surface roughness
fabrication, characterization and photovoltaic study of a TiO_2 microporous electrode 144
Surface structure
the microstructure of thin films observed using atomic force microscopy 15

Tin oxide
a new photovoltaic effect from $CuInSe_2$ (or related materials)/SnO_2 structures 137
characteristics of indium tin oxide films deposited by r.f. magnetron sputtering 32
Titanium
properties of titanium–tungsten thin films obtained by magnetron sputtering of composite cast targets 1
Titanium carbide
laser chemical vapour deposition of TiN and TiC films 7
Titanium nitride
laser chemical vapour deposition of TiN and TiC films 7
Titanium oxide
fabrication, characterization and photovoltaic study of a TiO_2 microporous electrode 144
Transmission electron microscopy
structural and optical properties of InP/GaAs strained heterostructures grown by metal–organic chemical vapor deposition 36
Tungsten
properties of titanium–tungsten thin films obtained by magnetron sputtering of composite cast targets 1

X-ray diffraction
C_{60} films on surface-treated silicon: recipes for amorphous and crystalline growth 147
influences of substrate surface orientation on misfit accommodation in InGaP/GaAs heterostructures 72
X-ray photoelectron spectroscopy
the interfacial chemistry of metallized, oxide coated, and nanocomposite coated polymer films 77

Zinc oxide
characteristics of zinc oxide thin films prepared by r.f. magnetron-mode electron cyclotron resonance sputtering 22
the effect on polycrystalline ZnO film surfaces due to an Ar plasma introduced by a vacuum gauge 58
